

HEAD & FACE PROTECTION

THE HARD HAT FACTS

Not wearing a hard hat or wearing one that is past its service life can be a fatal mistake.

Walking into objects; being underneath falling objects; hitting head when slipping, tripping, and falling; and falling from above are common causes of traumatic brain injuries in the U.S. (falling accounts for 35% alone).

MSA recommends that its hard hat shells be used no more than 5 years and suspensions replaced every 12 months (calculated from date of first use).
